

Introduction to Behavioural Safety

Human reliability is a significant factor behind more than 85% of accidents, and arguably the greatest challenge to those responsible for ensuring safe places of work.

This course looks to establish the principal causes of human error and health and safety violations, and plays a vital role in contributing to the vision of an accident and injury free culture.

Aimed at:

- Quality/ Safety Managers/ Supervisors
- Auditors/Inspectors
- Heads of departments

Benefits:

- Managers increase their skills in techniques of positive reinforcement.
- Better reporting of hazards, shortcomings in protection arrangements, accidents and near misses can increase the likelihood of developing effective methods for addressing and reducing risks, saving potential downtime costs and reducing the possibility of legal action.
- It positively reduces accidents, incidents, ill health and down time, along with their associated direct and indirect costs.
- Continuing improvements in safety culture.

Course coverage overview:

- A basic understanding of the psychology of behaviour
- Be able to describe and apply the key theories which relate to effective behaviour management
- The skill to explain the importance of managing workplace consequences
- How behavioural compliance can be used to measure health and safety performance
- An understanding of the key components of a successful behaviour change process
